Industrial Packaging

Printed *Rewind*, Rolls *and* Sheets

**Detmold Industrial Packaging** has extensive printing, slitting and sheeting capabilities, allowing us to supply a wide range of plain and printed rolls and sheets for many different applications.

The manufacture of coated rewind products for automated form, fill and seal applications is an example of the breadth of capability available to our Customers. Packages that are produced as part of the actual packaging process are becoming more popular as Customers take advantage of new and more economical packaging methods.

We also supply a wide variety of food wraps featuring coated and waxed papers as well as laminates featuring foils, polymers, aqueous and specialist coatings.

Our extensive experience in printing paper products and our knowledge of packaging machinery and applications makes our range the ideal choice.

Some of the many applications for this product range include:

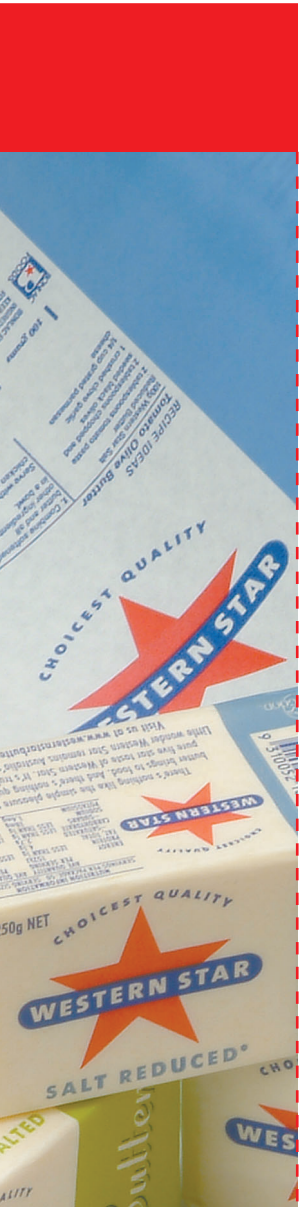

- > Printed Rolls & Sheets
- > Food Wrap
- > Form, Fill & Seal

## Printed *Rewind*, Rolls *and* Sheets

### Printed Rolls & Sheets

Our printed rolls and sheets are used for many applications from wraps for butter and dairy products to printed rewind for the manufacture of retail sugar bags.

### Food Wrap

Printed wraps provide an excellent opportunity to achieve premium branding and product positioning. Our wraps are available with a variety of special coatings, dependent upon Customer requirements.

### Form, Fill & Seal

The material is typically formed around the product, sealed and cut to form a complete package. This operation can be performed in either the horizontal or vertical direction, depending upon the product requirements.
